peptidylprolyl isomerase (EC 5.2.1.8) - German cockroach
N.Alternate names: cyclophilin
C.Species: Blattella germanica (German cockroach)
C.Species: 10-701-1996 #sequence_revision 13-mar-1997 #text_change 20-Jun-2000
C.Accession: 563995
R.Martinez-Gonzalez, J.; Hegardt, F.G.
Bur. J. Blochem. 24, 284-292, 1995
Bur. J. Blochem. 24, 284-292, 1995
A.Title: Characterization of a cDNA encoding a cytosolic peptidylprolyl cis-trans-iso
A.Reference number: 563995; MulD:96096751
                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A.Cross-references: EMBL:X87418; NID:g1235942; PIDN:CAA60869.1; PID:g1772496 C.Superfamily: peptidylprolyl isomerase; cyclophilin homology C.Superfamily: petidylprolyl isomerase P:3-164/Domain: cyclophilin homology <CYP>

```
A Molecule type: Protein
A Residues: 1-179 < CH2>
Cicoment: This enzyme catalyzes interconversion of the cis and trans intho peptide b
C; Comment: This enzyme catalyzes interconversion of the cis and trans into peptide b
C; Comment: This enzyme catalyzes interconversion of the cis and trans into peptide b
C; Superfamily: peptidylprolyl isomerase; cyclophilin homology
C; Keywords: cis-trans-isomerase; cyclosportin A binding; cytosol; nucleotide binding;
F; 1-179/Domain: cyclophilin homology cCYP>
F; 81-88/Region: nucleotide-binding motif A (P-loop)
F; 81-88/Region: nucleotide-binding motif A (P-loop)
F; 23.712/Binding site: phosphate (Thr) (covalent) (by casein kinase C) #status predicted
F; 23.78 hinding site: phosphate (Ser) (covalent) (by protein kinase C) #status predicted
F; 23.78 hinding site: phosphate (Ser) (covalent) (by casein kinase II) #status predicted
F; 132/Rinding site: substrate (Thr) #status predicted
F; 132/Rinding site: phosphate (Thr) (covalent) (by casein kinase II) #status predicted
F; 172/Binding site: phosphate (Thr) (covalent) (by casein kinase II) #status predicted
F; 172/Binding site: phosphate (Thr) (covalent) (by casein kinase II) #status predicted

A; Residues: 2-21 < KRU>
A; Residues: 2-21 < KRU>
A; Experimental source: nuclear cyclophilin of H4-7 cells
C; Genetics:
A; Gene: CypA
C; Function:
A; Description: catalyzes the cis-trans isomerization of peptidylproline peptide bonds
C; Superfamily: peptidylprolyl isomerase; cyclophilin homology
C; Keywords: cis-trans-isomerase; cyclophilin homology
F;3-164/Domain: cyclophilin homology < CYP>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A; Accession: A15632

C; Comment: The mature cytosolic and mitochondrial forms are identical in sequence, although in al residue.
C; Function:
A; Description: catalyzes the cis-trans isomerization of peptidylproline peptide bonds
C; Superfamily: peptidylprolyl isomerase; cyclophilin homology
C; Keywords: alternative intitators: alternative splicing; cis-trans-isomerase; cyclospor
C; Keywords: alternative intitators: alternative splicing; cis-trans-isomerase; cyclospor

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description

                                   Proc. Natl. Acad. Sci. U.S.A. 91:5183-5186(1994).

-1- FUNCTION: PDIASES ACCELERATE THE FOLDING OF PROTEINS.
-1- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.
-1- ENZYME REGULATION: CYCLOSPORIN A (CSA) INHIBITS CYPB.
-1- SUBCELLULAR LOCATION: ENDOPLASMIC RETICULM LUMEN.
-1- SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PPIASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                      PEPTIDYL-PROLYL CIS-TRANS ISOMERASE PREVENT SECRETION FROM ER.                          Murine cyclophilin-SI: a variant peptidyl-prolyl isomerase with a putative signal sequence expressed in differentiating F9 cells."; Blochim. Biophys. Acta 1129:13-22 (1991).
-!- FUNCTION: PETASES ACCELERATE THE FOLDING OF PROTEINS.
-!- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.
-!- ENZYME REGULATION: CYCLOSPORINA (CSA) INHIBITS CYPB.
-!- SUBCELLULAR LOCATION: BNDOPLASMIC RETICULUM LUMEN (BY SIMILARI).
-!- SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PPIASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE-90300692; PubMed-2194066;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antigen of Echinococcus granulosus.";
Mol. Blochem. Parasitol. 36:287-290(1989).
-! FUNCTION: PPIASES ACCELERATE THE FOLDING OF PROTEINS.
-! CAPALYTIC ACTIVITY: CIS-TRANG ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.
-! ENXYME REGULATION: BINDS CYCLOSPORIN A (CSA). CSA MEDIATES SOME OF ITS EFFECTS VIA AN INHIBITORY ACTION ON PPIASE.
-! SUBCELLULAR LOCATION: CYTOPLASMIC.
-! SIMILARITY: BELONGS TO THE CYCLOPHILIN'TYPE PPIASE FAMILY.

"Isolation of a cDNA sequence encoding a peptidyl-prolyl cis-trans isomerase from Periplaneta americana antennae.";

Submitted (JAN-1998) to the EMBL/Genank/DDBJ databases.

-! FUNCTION: PEPTIDYL-PROLYL CIS-TRANS ISOMERASES ACCELERATE THE FOLDING OF PROTEINS (BY SIMILARITY).

-! CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.

-! SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PEPTIDYL-PROLYL CIS-TRANS ISOMERASE FAMILY.

The 5' ESTs were prepared from total human RNAs or poly4+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs, and genomic
           This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5' ESTs are also used in diagnostic, forensic, gene therapy and

The invention relates to a composition for modulating somatolactogenic function, comprising cyclophilin B (CypB), a mutant of cyclophilin B C function, comprising cyclophilin Which residues 2-12 of the mature protein are absent) or an inhibitor of the interaction of cyclophilin B with a comatolactogenic hormone (e.g., prolactin, growth hormone). The invention can also relates to a method of identifying inhibitors of somatolactogenic functions using CypB and a somatolactogenic hormone, and a method for claspinsing diseases associated with abnormal somatolactogenic functions using CypB and a sample from a patient. Cyclophilin B is useful for augmenting somatolactogenic function in the animal, and cyclophilin B mutant or a composition comprising an inhibitor of the interaction of cyclophilin B with a somatolactogenic function, breasting cyclophilin B is useful in the treatment of immunosuppression, composition comprising cyclophilin B is useful in the treatment of immunosuppression, in the treatment of short stature, muscle wasting and osteoporosis. A composition comprising cyclophilin B with a somatolactogenic composition cyclophilin B with a somatolactogenic composition comprising cyclophilin B with a somatolactogenic composition cyclophilin B with a somatolactogenic composition comprising cyclophilin B with a somatolactogenic composition cyclophilin B with a somatolactogenic composition cyclophilin B with a somatolactogenic sequence represents a human cyclophilin B with a somatolactogenic concerve represents a human cyclophilin B with a somatolactogenic sequence represent sequence is not shown in the specification, but be a sequence is not shown in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel composition for modulating somatolactogenic function, comprises cyclophilin B, its mutant or an inhibitor of interaction of cyclophilin B with somatolactogenic hormone .
                                                                                                                                                                                                                                                                                                                                                                   Human cyclophilin B; CypB; prolactin-binding; growth hormone-binding; somatolactogenic function modulator; immunosuppression; short stature; muscle wasting; osteopprosis; HIV infection; breast cancer; prostate cancer; gigantism; acromegaly; hyperprolactinaemia; c-terminal deletion mutant; mutein.
                                                                                                                                                                                                                                                                                                                         Human cyclophilin B (CypB) C-terminal deletion mutant, CypB-AIAKE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 211;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a composition for modulating somatolactogenic function, comprising cyclophilin B (CypB), a mutant of cyclophilin B (particularly a CypB mutant in which residues 2-12 of the mature protein are absent) or an inhibitor of the interaction of cyclophilin B with a somatolactogenic hormone (e.g., prolactin, growth hormone). The invention also relates to a method of identifying inhibitors of somatolactogenic functions using CypB and a somatolactogenic hormone, and a method for diagnosing diseases associated with abnormal somatolactogenic functions by assessing CypB levels in a sample from a patient. Cyclophilin B is useful for augmenting somatolactogenic function in the animal, and cyclophilin B mutant or a composition comprising an inhibitor of the interaction of cyclophilin B with a somatolactogenic hormone, is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       for inhibiting somatolactogenic function in the animal. A composition comprising cyclophiln B is useful in the treatment of immunosuppression, in the treatment of short stature, muscle wasting and osteoporosis. A composition comprising cyclophilin B mutant or a composition comprising cyclophilin B mutant or a composition comprising hormone, is useful for treating HIV infection, breast and prostate cancer, gigantism/acromegaly, and hyperprolactinaemia. The present sequence represents human cyclophilin B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel composition for modulating somatolactogenic function, comprises cyclophilin B, its mutant or an inhibitor of interaction of cyclophilin B with somatolactogenic hormone \,
                                                                                                                                                                                                                                                                                                                    Human cyclophilin B; CypB; prolactin-binding; growth hormone-binding; somatolactogenic function modulator; immunosuppression; short stature; muscle wasting; osteoporosis; HIV infection; breast cancer; prostate cancer; gigantism; acromegaly; hyperprolactinaemia.

include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiasthmatic; antirheumatic; antiarthritic; antidiabetic; antiasthmatic; antirheumatic; antiarthritic; antidiabetic; antiasthmatic; antirheumatic; antibacterial; antiviral; certific ammatological; neuroprotective; cardiant; thrombolytic; coagulant; coortropic; vasotropic; antipsoriatic and antiangiogenic. The noctropic; vasotropic; antipsoriatic and antiangiogenic. The polynucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Colynucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating the proliferation, differentiation or mobilisation of cimmune cells, to treat disorders of haematopoietic cells, autoimmune cells, to treat disorders of haematopoietic cells, autoimmune cells; andulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and confirmant or ancers, cardiovascular disorders, neurological disease and confirmant or viral infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to the massert invention.
                                                                                                                                                               diagnosis; cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiarthmatic; antirheumatic; antibarthritic; antiviral; antiniflammatory; antithyroid; antiallergic; antibacterial; cardiant; dermacological; neuroprotective; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic; antiangiogenic; gene therapy; inflammation; immune disorder; haematopoiatic cell disorder; autoimmune disorder; allergic reaction; graft versus host disease; organ rejection; haemostatic; thrombolytic; cardiovascular disorder; infection; neurological disease; drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB44239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated nucleic acids comprising sequences encoding peptides useful for treating or diagnosing e.g. cancer \dot{\cdot}

The cyclophilin is useful for inhibiting the growth and development of parasites or for treating parasitic infections which are not susceptible to cyclosporin A. The purified 'tyrosine-containing' cyclophilin can be used to produce antibodies, either polyclonal or cyclophilins in other parasites.

The invention provides sequences encoding Dictyostellum Path, human DP1, human DP1 (abP1) and Dattyostellum Cyclophilin (DdCyP2) which are bisphosphonate binding proteins. The invention also provides methods for burifying and producing such bisphosphonate binding protein, or an antibody which binds to the binding protein can be used in the diagnosis of calcium metabolism disorders. They can also be used to treat calcium metabolism disorders, where the treatment is for the regulation of bone metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                       Bisphosphonate binding protein - used to treat calclum metabolism disorders, including bone metabolism, hypercalcaemia, bone metastases, and osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        hypercalcaemia, bone metastases, and osteoporosis, especially by regulation of bone metabolism via interaction with cyclosporine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human prostate cancer antigen protein sequence SEQ ID NO:1279.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB 19; Length 180;

                                                                                                                                                                                                                                     AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. mitochondrial core components e.g. adenine nucleotide translocator (ANT) proteins are mitochondrial core components e.g. adenine nucleotide translocator (ANT) proteins are mitochondrial permeability transition (MTP) pore components responsible for mediating transport of ADP across the mitochondrial inner membrane. The present invention relates to a novel nucleic acid expression construct comprising a promoter operably linked to a polynucleotide encoding a mitochondrial component polypeptide (e.g. ANT) fused to an energy transfer promoter operably linked to a polynucleotide encoding a mitochondrial component polypeptide (e.g. ANT) fused to an energy transfer component polypeptide (e.g. ANT) fused to an energy transfer consecution (ETP) or a FLASH sequence). The novel expression construct can alter mitochondrial core components. The methods are useful for screening for a mitochondrial function or dysfunctional cell survival. These agents are useful for the prevention or treatment of diseases associated with altered consecution or dysfunctional cell survival, such as mitochondrial function or dysfunctional cell survival, such as a mitochondrial encephalopathy, lactic acidosis, and stroke, hyperproliferative disorders e.g. cancer, and deafness.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination; sequence.
                                                                                                                                                                                                                                                                                                                                                        New nucleic acid expression constructs, useful for screening for agents that alter mitochondrial permeability transition (MPT), comprises polynuclectide encoding MPT polypeptide or cyclophilin polypeptide fused to energy transfer molecule.

The method involves detecting the presence of a cervical cancer-associated protein (CVC) in a tissue or body fluid sample. The CVC is characterised as having a molecular weight of 44900 69400 Daltons as determined by sodium dodecyl-sulphate (SDS)-PAGE techniques and an isoelectric point (pl) of 5.1-6.6 as determined by standard isoelectric focusing techniques. The protein is further characterised as being a non-chromatin protein which is detectable at a higher level in a human neorical cancer cell than in a normal human cervical cell, as determined by 2D-gel electrophoresis. The methods can be used for the early and rapid detection of cervical cancer, for treating cervical cancers and for monitoring the efficacy of such treatment.
                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Detection and therapy of cervical cancer - using specific cervical cancer-associated proteins as targets for treatment or as indicators for detection

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 14,

Eur. J. Blochem. 234, 284-292, 1995
A.Title: Characterization of a cDNA encoding a cytosolic peptidylprolyl cis-trans-isomer
A.Reference number: S63995, MUID:96096751
A.Status: preliminary
A.Molecule type: mRNA
A.Status: preliminary
A.Molecule type: mRNA
A.Residues: 1-164 cAMA.
A.Cross-references: EMBL:X87418; NID:91235942; PIDN:CAA60869.1; PID:91772496
C.Superfamily: peptidylprolyl isomerase; cyclophilin homology
C.Keywords: cis-trans-isomerase

-i. FUNCTION: PPIASES ACCELERATE THE FOLDING OF PROTEINS.

-i. CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.

-i. ENZYME REGULATION: CYCLOSPORIN A (CSA) INHIBITS CYPB.

-i. SUBCELLULAR LOCATION: ENDOPLASMIC RETICULUM LUMEN.

-i. SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PPIASE FAMILY.

"Cyclophilin-B is an abundant protein whose conformation is similar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PEPTIDYL-PROLYL CIS-TRANS ISOMERASE B. PREVENT SECRETION FROM ER.
                                                                                                                                                                                                                                                                                                                                                                     --- FUNCTION: PPTASES ACCELERATE THE FOLDING OF PROTEINS.
--- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.
---- ENZYME REGULATION: CYCLOSPORIN A (CSA) INHIBITS CYPB.
---- SUBCELLULAR LOCATION: ENDOPLASMIC RETICCLUM LUMB.
---- SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PPIASE FAMILY.
